

In the Claims

Please cancel claims 2 and 6, and amend the claims as follows.

---

1. (Currently amended) A sheet-form adhesive preparation characterized in that the quantity of heat required for the evaporation of water when exposed for 30 minutes to an atmosphere of 25°C and 60%Rh is 0.6 to 13 (cal) per unit area (cm<sup>2</sup>), and in that it contains 1 to 50 wt% of a glycol and/or a polyhydric alcohol.
2. (Canceled)
3. (Currently amended) The sheet-form adhesive preparation according to Claim 1 2 characterized in that the glycol has a polyether structure and is a polyethylene glycol having an average molecular weight of 200 to 600 and/or a polypropylene glycol having an average molecular weight of 500 to 3000.
4. (Currently amended) The sheet-form adhesive preparation according to Claim 1 2 characterized in that the polyhydric alcohol is a low molecular weight polyhydric alcohol having 2 to 3 hydroxyl groups in its molecular structure.
5. (Previously presented) The sheet-form adhesive preparation according to Claim 1 in which it is used as a sheet-form pack preparation.
6. (Canceled)
7. (Previously presented) The sheet-form adhesive preparation according to Claim 3 in which it is used as a sheet-form pack preparation.
